METHODS AND APPARATUS FOR RELIEF PROJECTION OF STILL AND MOTION PICTURES, tr. by F. H. B. 10 Mar 61, 33p. (figs. omitted)
Order from LC or SLA m\$3.00, ph\$6.30 61-19483

Trans. of French patent 1,006,458, gr. 12, cl. 2, appl. 17 Jan 48, granted 23 Jan 52, pub. 23 Apr 52.

The invention is based on the well-known principle of recording perspective views of the subject seen from two or more different observation points $p^1, p^2, \dots, p^n$, then displaying them to the spectator at a suitable angle, so that his eyes perceive respectively the single, complete perspective views corresponding to two observation points p^k and p^m which change with the position of the spectator in the auditorium.
